Passenger and Light Truck Tires

CENTARA

GRAND TOURER H/T

- Four wide longitudinal water-escaping grooves and spacious transverse water-escaping grooves enhance water dispersion, providing excellent traction and braking on wet roads.
- Powerful with the luxurious SUV-oriented UHP tire.
- Outstanding performance on all roads with the wide tread and high groove-sipe ratio. Tranquil ride with the ideal pitch design and the variable sound frequency blocks. Special quality with good performon anti-puncture, underlay-damage and anti-fraction from the unique sidewall protection layer.

ADVENTURE **A/T**

- Rectangle shoulder and wide tread design with 3D multiple thin sipes increases road contact area, provides superior handling on both wet and dry surfaces, and enhances wear-resisting performance.
- Wide pyramidal-shaped sipes for all-weather and various roads delivers excellent safety, maintains firm grip performance and aquaplaning resistance on wet roads, and enhances off-road steering response.
- Optimized pitching sequence blocks design offers quieter ride.
- Unique lateral flange protector design enhances protection from puncture and impact damage.

e.VANTI **EV7**

- Asymmetric pattern design provides better maneuverability.
- Multi-pitch and narrow groove width render better mute effect.
- Narrow groove on the outer side increases mileage and improves handling performance.
- Inner irregular broken-line design lowers down noise.

VANTI HP

- Special asymmetric pattern design provides excellent high speed and handling performance.
- Spiral groove design contributes to outstanding water evacuation and wet grip.
- Special compound design reduces heat generation and enhances grip performance under all road conditions.

- Combined design of multi-pitch tread pattern effectively reduces resonance noise of tread pattern surface.
- Reasonable groove and steel sheet distribution achieves more even pressure, reduces generation of eccentric wear, and improves wearability.
- Upgraded tread formula furnishes extraordinary wet braking and handling performance.
- Straight-groove design of tire shoulder effectively reduces splashing height and brings superior drainage performance.

COMMERCIAL 512

- Optimized structure design technology reduces calorific value of tire casing and improve the durability.
- Reinforced tread and tire casing structure improves tire elasticity and guarantees stronger resistance to road impact.
- Coordination of two zigzag main grooves plus transverse grooves balances driving stability and traction performance.
- Design of three groups of longitudinal steel sheet grooves with continuous bending improves grip performance on dry and wet roads.

- 3 wide-and-deep ditches help improve the handling performance for driving on wet land in rainy days.
- Enlarged pattern blocks of tread are interlaced with the transverse fine grooves, enhancing high-speed traction performance.
- Optimized contour design makes the vehicle more stable and provides comfortable driving experience.
- Highly saturated pattern and excellent structural design improve operation response during driving and shorten braking distance.

VANTI TAXI

- Improved formula enhances unit wear performance of tread rubber, making it more suitable for the needs of taxi owners and offering longer mileage and cost effectiveness.
- Design of special tire profile and internal structure enhances the tire's capacity of absorbing impact and vibration during driving, substantially improving tire comfort; pitches of varied sizes of patterns offset the noise, making the driving more quiet.
- Design of shoulder with large pattern blocks connected by strong ribs ensures shoulder rigidity and improves steering performance of vehicle, which is suitable for taxi's characteristics of frequent lane change and turning.
- Extended area of pattern block betters wear resistance of tire; large tread block lengthens overall service life, strengthens grip and improves handling stability.

VANTI WINTER

- Two wide main grooves and wide tread design ensures a superior handling performance on ice and snow ground.
- Sawtooth-shaped design on the tread guarantees excellent braking performance on ice and snow.
- Advanced silica compound offers enhanced traction and balance in winter driving conditions.
- Directional, V-shaped tread pattern improves water evacuation and enhances winter traction.

SNOW CUTTER

- Serrated design in the outside main groove assures high grip and braking force on ICE&SNOW covered surfaces.
- Deep and densely distributed grooves and steel sheet helps soften the tread, contributes to shorten braking distance on ice covered surface.

WINTER 621

- Special composite tread formula enables upper rubber to maintain softness and elasticity at low temperature and lower rubber to maintain overall rigidity of tire.
- A large number of smaller pattern blocks are designed to enhance traction and handling on snowfield while providing maximal grip required for vehicle steering.
- Four longitudinal serrated grooves effectively drain snowmelt and ice water, improving wetland performance and braking performance of tire.
- More transverse patterns and grooves elevate scratching effect of corners so as to better absorb moisture, break ice film, and improve driving and braking performance of tire on ice-and-snow covered roads.

WINTER 626

- Special composite tread formula enables upper rubber to maintain softness and elasticity at low temperature and lower rubber to maintain overall rigidity of tire.
- Various kinds of crossed patterns effectively contain ice and snow, forming a high-strength snow column when driving on snowy roads and providing effective driving and braking capabilities for tire.
- More smaller pattern blocks and pattern grooves with optimal density evenly distribute tread pressure, significantly improving road adhesion of tire.
- Design of intrusive transverse pattern groove extending from the tire shoulder to the center strengthens anti-skid performance and traction of tire on curves.

WINTER 628

- Specially designed tread load formula. The upper layer of rubber can still remain soft and elastic at low temperatures, and the lower layer of rubber can maintain the overall rigidity of the tire.
- The dense steel sheet design enhances the rigidity of the pattern while ensuring the softness and elasticity of the original tire formula. It can break the water film with more and finer slit patterns and inhibit tire slippage.
- A stronger carcass structure design gives the tire a greater load-carrying capacity and ensures driving safety of the tire under loaded conditions.
- Deeper tread depth and larger tread surface area make it less likely for the tire to cut off snow pillars and ice pillars when driving, increasing the snow and ice removal capacity and providing stronger drivability and braking for the tire. At the same time, the angular design of the shoulder area can effectively prevent tire sideslip when the vehicle turns.

WINTER RX858

- Combination of left-right symmetrical "herringbone" pattern design, widened transverse grooves, fine steel sheets, and patterns studded with steel nails improves tire grip when driving on ice-and-snow-covered roads.
- Optimized fine seam depth of pattern plus strengthened pattern realize balanced functions on ice, snow, dry and wet roads.
- Optimized sea-land ratio improves the guiding stability of driving on roads and increases contact area between tread and road surface, ensuring excellent ice and snow braking performance of tire.
- Low-temperature-resistant formula enables tire to maintain relatively low rubber hardness, featuring relatively strong low-temperature performance.
